

Good — now we're locking the **entire system properly**.

What you asked is correct:

Every pillar should be defined like we did for flashcards — **deep, structured, and integrated with Home**.

This is your **final system-level PRD (Execution Ready)**.

EduOnx – Complete Product System PRD (Final v4.0)

SYSTEM OVERVIEW

Core Structure:

- 5 Pillars (Functional Systems)
 - 1 Unified Home (Control Layer)
-

0. UNIFIED HOME (CONTROL CENTER)

Purpose:

Eliminate navigation. Drive action instantly.

Home = Decision Engine

Block 1: Today's Plan (Primary Driver)

- AI-generated tasks
- Ordered sequence
- CTA: **Start Now**

👉 Removes thinking

◆ Block 2: Continue Learning

- Resume last topic instantly
-

◆ Block 3: Focus Trigger

- “Start Focus Session”
 - Shows:
 - Current task
 - Time estimate
-

◆ Block 4: Doubt Solver (Persistent Layer)

- Always visible input bar
 - Context-aware
-

◆ Block 5: Quick Tools (High Utility Layer)

- 🔍 Universal search (Google)
- ✂ Summarize
- 🧠 Explain simply
- 📖 Word meaning
- 📝 Quick notes
- 📺 Youtube Search
- Ask AI (EduOnx)

👉 Replaces external tools

◆ Block 6: Practice Reminder

- Flashcards due
- Quiz suggestion

◆ Block 7: Insights Preview

- Time spent
- Streak
- Focus score

👉 If Home works → product works

👉 If Home fails → everything fails

1. GUIDED LEARNING (MENTOR SYSTEM)

Purpose:

Remove confusion of “what next”

System Components:

1. Goal Input

- Exam / Skill / Topic
-

2. Roadmap Generator

- Breaks into:
 - Topics
 - Subtopics
 - Sequence
-

3. Daily Planner

- Assigns:
 - Tasks
 - Time blocks
-

4. Adaptive Engine

- Adjusts based on:
 - Completion
 - Performance
 - Time usage
-

UX Flow:

User:

- Opens Home
 - Sees “Today’s Plan”
 - Clicks Start
-

Integrations:

- Focus Mode → executes tasks
 - Practice → after completion
 - Insights → tracks progress
-

Failure Point:

If roadmap is generic → user leaves

2. RESOURCE MANAGEMENT SYSTEM

Purpose:

Eliminate chaos of materials

Core Capabilities:

1. Resource Input

- Upload:
 - PDFs
 - Links
 - Notes
-

2. Auto Organization

- Structure:
 - Subject → Topic → Subtopic
-

3. Smart Interaction

♦ Chat with Resource

- Ask:
 - “Explain this page”
 - “Summarize this”
-

♦ Smart Tools:

- Summarization
 - Key points extraction
 - Simplification
-

UX Flow:

User opens topic →

- Sees all materials
 - Interacts directly
-

Integrations:

- Doubt solver → contextual
 - Flashcards → auto-generated
 - Practice → derived questions
-

Failure Point:

If search & organization is weak → user returns to Google

3. FOCUS MODE (CONTROL SYSTEM)

Purpose:

Eliminate distraction, enforce execution

Capabilities:

- Full-screen mode
 - Timer (Pomodoro/custom)
 - Task lock
 - No UI clutter
-

UX Flow:

Home → “Start Focus” →
Only task visible

Integrations:

- Guided Learning → task source
 - Practice → post-session
 - Tracking → logs time
-

Failure Point:

If user can exit easily → system breaks

4. DOUBT SOLVER (REAL-TIME SUPPORT SYSTEM)

Purpose:

Prevent learning breaks

Capabilities:

1. Quick Ask

- Instant question
-

2. Contextual Doubt

- Linked to:
 - Topic
 - Resource
-

3. Step-by-Step Explanation

- Not just answer
 - Full reasoning
-

UX Placement:

- Floating input (Home + Learning screen)
-

Integrations:

- Resource system
 - Guided learning
 - Practice
-

Failure Point:

If response is slow or generic → user leaves

5. PRACTICE ARENA (EXECUTION SYSTEM)

Purpose:

Convert learning into mastery

3 Core Modules:

5.1 Active Recall (Flashcards)

Capabilities:

- Auto-generated cards
 - Manual creation
 - Spaced repetition
-

UX:

- Home reminder:
→ “Review 10 cards”
-
-

5.2 Concept Testing (Quizzes)

Capabilities:

- Topic-based quizzes
 - AI-generated questions
-
-

5.3 Application Tasks

Capabilities:

- Real-world problems
 - Scenario-based learning
-
-

Flow:

Learn → Flashcards → Quiz → Apply

Integrations:

- Insights → performance
- Guided learning → scheduling

- Home → reminders
-

Failure Point:

If practice is optional → users skip → product fails

6. INSIGHTS SYSTEM (FEEDBACK ENGINE)

Purpose:

Show real progress

Metrics:

- Time spent
 - Topic completion
 - Weak areas
 - Retention score
 - Focus score
-

UX:

- Visual dashboard
 - Simple insights
-

Integrations:

- Practice → performance
- Focus → time
- Guided learning → adjustments

Failure Point:

Too much data = ignored

FINAL CORE LOOP (SYSTEM HEART)

Plan → Focus → Learn → Stuck → Solve → Recall → Test → Apply → Track → Improve

MVP (FINAL LOCK)

MUST BUILD:

- ✓ Unified Home
 - ✓ Guided Learning (basic roadmap)
 - ✓ Resource upload + basic organization
 - ✓ Focus Mode
 - ✓ Doubt solver (text)
 - ✓ Flashcards (basic spaced repetition)
 - ✓ Quiz (basic)
 - ✓ Time tracking
-

NOT NOW:

- ✗ Advanced AI
 - ✗ Voice
 - ✗ Gamification
 - ✗ Community
-

FINAL HARD TRUTH

You now have a **complete product system**.

If this fails, it won't be because of:

- missing features

It will fail because of:

- bad UX execution
 - slow performance
 - weak AI
-

NEXT STEP (NO MORE THINKING)

Now you don't need more PRD.

You need:

👉 **UI/UX Design (Full screens + layout system)**

Because this system is **complex internally but must feel simple externally**.

Say:

“Design full UI”

And I'll convert this into:

- exact screens
- layout hierarchy
- real product design system

Like a top-tier SaaS product.
